

AI Maturity Assessment

8 June 2026 - ID G00854046 - 8 min read

By: Pieter den Hamer, Leinar Ramos, Erick Brethenoux, Anthony Mullen, Joe Ham
Initiatives: Strategy, Risks and Opportunities; Scale and Integrate AI to Maximize Value and Minimize Risk; Accelerate Enterprise AI Value Realization at Scale

Technology leaders can use our online tool to gauge their maturity across seven main AI capability categories: strategy, value, organization, people and culture, governance, engineering, and data. Take this assessment to establish your current maturity, find priority gaps and receive recommended next steps.

Overview

The AI maturity assessment is an essential tool for organizations looking to systematically assess and enhance their AI capabilities.

It is particularly useful when an organization wants to:

- Rationalize its AI ambition in line with its current readiness
- Establish a clear AI roadmap for development
- Measure progress as it executes against this AI roadmap
- Benchmark its progress in each of the pillars against its peers

This assessment also provides a framework for continuous improvement, enabling organizations to adapt to evolving technologies and market demands, thereby maintaining a competitive edge.

We recommend organizations conduct this AI maturity assessment annually.

About the Tool and Its Results

Gartner's AI Maturity Assessment provides a structured framework for evaluating and enhancing an organization's capabilities in using AI.

This framework (see Figure 1), also known as the Gartner AI maturity model, is based on enterprise AI capabilities, which are arranged across two tiers in this online tool:

- Tier 1 shows the seven primary capabilities (see Table 1).
- Tier 2 further details these at a more granular level (see Table 2).

The framework and its capabilities are relevant to all sectors, business areas and AI technologies. In other words, they apply to all public and private sectors, all business functions and to all forms of AI, such as foundational AI (including data science and machine learning), generative AI, and agentic AI.

Figure 1: Enterprise AI Capabilities for Maturity Model: Tier 1 and 2

Enterprise AI Capabilities for Maturity Model - Tier 1 and 2

Tier 1	 AI strategy	 AI value	 AI organization	 AI people & culture	 AI governance	 AI engineering	 AI data
Tier 2	Monitor and interpret AI trends	Develop and manage AI use case portfolio	Develop external partnerships and alliances for AI	Manage culture and change for / due to AI	Create, maintain, and evolve AI, governance policies and controls	Design and architect AI applications and systems	Acquire and prepare AI data
	Develop and rationalize AI ambition	Develop AI value propositions and business cases	Manage and balance internal and external ecosystem	Evolve roles and staffing for / due to AI	Develop AI governance operating models and teams	Develop, test and integrate AI applications and systems	Manage and govern AI data
	Develop and refine AI strategy	Develop AI product portfolios	Evolve internal operating model	Deliver skills, training, and literacy for AI	Engineer oversight systems and enforce policies	Deploy, operate and scale AI systems	Build AI data utilization and insights
	Develop and coordinate AI strategic roadmap					Manage project, platform and application portfolios	
	Innovate / incubate AI					Develop and manage AI engineering teams

821273_C

This tiering structure helps enterprises examine the maturity of capabilities at various levels of abstraction and depth.

Together, these dimensions provide a comprehensive view of an organization's AI maturity, which can guide strategic improvements and drive competitive advantage.

Table 1: Tier 1 AI Capabilities

(Enlarged table in Appendix)

Tier 1 AI capability	Description	Topics covered
AI strategy	Develop and execute the AI strategy: The development and implementation of an AI strategy that is aligned with the organization's business strategy and its AI ambition	Trends, ambition, strategy, roadmap, alignment, innovation, transformation
AI value	Manage the AI portfolio and use cases: The systematic identification, prioritization and management of AI initiatives	Use cases, products, portfolio, prioritization, feasibility, business case, benefits and costs, metrics
AI organization	Evolve the AI operating model: The integration and collaboration within the AI ecosystems, including internal teams and external partnerships	Operating model, center of excellence, teams, partners, alliances, ecosystem
AI people and culture	Foster people and culture for AI: The organization's commitment and ability to foster AI literacy, AI skills and a culture of innovation	Roles, workforce, staffing, skills, literacy, training, culture, change, organizational readiness
AI governance	Govern AI and manage risks: The establishment and enforcement of governance policies and standards to ensure ethical and compliant AI practices	Risks, trust, security, safety, ethics, regulations, compliance, policies, guidelines, monitoring
AI engineering	Engineer AI systems and platforms: The robustness and efficiency of AI development and deployment processes	Design, architecture, buy/blend/build, test, embedding, deployment, operations, infrastructure, platforms, frameworks, methodologies, collaboration
AI data	Prepare and manage data for AI: The quality, accessibility and utilization of data for AI applications	Data acquisition, preparation, quality, integration, semantics, data platform, privacy, multimodal data

Source: Gartner (June 2026)

Tier 2 subcategories provide more detail and a grouping of AI capabilities (see Table 2).

Table 2: Tier 2 AI Capabilities

(Enlarged table in Appendix)

Tier 2 AI capability ↓	Description ↓
AI strategy	
Monitor and interpret AI trends	Run a trend-scanning program and analyze the impact of trends on the organization.
Develop and rationalize the AI vision	Set the AI vision and ambition, combined with assessing and monitoring the organizational readiness for AI.
Develop and refine the AI strategy	Author and align the AI strategy, involving key AI stakeholders.
Develop and coordinate the AI roadmap	Develop and execute an AI roadmap with short-term and long-term milestones, coordinated with stakeholders.
Promote AI-driven innovation	Foster a culture of innovation by identifying and scaling ideas and experiments.
AI value	
Manage the AI use-case portfolio	Assess and prioritize AI use cases, and align the AI use-case portfolio with business objectives and AI capabilities.
Manage AI value propositions	Manage AI value propositions, develop business cases, measure value realization and monitor AI portfolio performance.
Develop the AI product portfolio	Identify and develop AI product opportunities, manage AI product portfolio, stakeholder engagement, communication and funding.
AI organization	
Develop external AI partnerships	Develop, foster and monitor external partnerships and alliances for AI.
Manage the AI ecosystem	Strategize and balance insourcing and outsourcing for AI capabilities, while managing continuity risks and dependencies across the AI ecosystem.
Evolve the internal operating model	Create, maintain and monitor the internal AI organization.
AI people and culture	
Manage AI-related change and culture	Foster, communicate and promote a culture and practices that are ready for AI adoption and change.
Evolve AI-related roles and staffing	Identify and develop AI roles and manage workforce planning, staffing and recruitment.
Deliver AI training and literacy	Implement and monitor AI education, upskilling and knowledge sharing.
AI governance	
Evolve AI policies and controls	Create, maintain and monitor AI policies and controls for compliance, ethical, security, safety, sustainability and other risks.
Develop AI governance teams and roles	Establish and evolve the AI governance operating model, including governance organization, processes, responsibilities and decision rights.
Monitor AI and enforce policies	Perform AI governance, oversight and assurance.
AI engineering	
Design and architect AI	Establish, apply and optimize AI system and integration architectures, as well as practices for design and engineering.
Develop, test and integrate AI	Select, build, ground, contextualize, train, validate and embed AI models or agents or applications.
Deploy, operate and scale AI	Bring AI models or agents or applications to production, monitor and optimize their security, impact, risks, value and performance, and scale where needed.
Manage AI platform and infrastructure	Develop, promote and monitor the use of an AI platform and infrastructure to facilitate, accelerate and scale AI initiatives.
Manage AI engineering	Initiate, facilitate and coordinate staffing and activities for AI engineering across teams and delivery projects.
AI data	
Acquire and prepare AI data	Source, transfer, store, integrate, transform and validate data for AI engineering and operations.
Manage and govern AI data	Enable the management and ensure the governance of data for AI.
Analyze AI data	Explore, visualize and analyze data to enhance AI training or improve AI-driven insights.

Directions for Use

To run the AI Maturity Assessment, click the “Launch” button at the top of this page and begin filling out the form. The assessment consists of a series of statements about AI capabilities. For each statement, you will need to select three things:

- **Current maturity:** The current maturity level ranges from one to five (see Table 3). This should reflect only where the organization is at the moment, independent of upcoming work that might increase maturity in the future.

- *Target maturity:* The target maturity level should range from one to five (see Table 3) and be anchored to a time horizon relevant to your AI program. We recommend setting targets for a one-year horizon and repeating this exercise annually. Higher target maturities should be reserved for the highest priority topics, and most organizations do not need to aim for a Level 5 maturity.
- *Importance:* The importance indicates to what extent the capability is relevant to the organization's adoption of AI.

Table 3: Maturity Assessment Levels (see Tables 1 and 2 above for capability descriptions)

<i>Level number</i> ↓	<i>AI capability</i> ↓	<i>Guidance</i> ↓
1	Does not exist (meets description <10%)	Our organization meets the capability description for less than 10%
2	Partially exists(meets description >=10%, <100%)	Our organization meets the capability description for more than 10%, but not completely
3	Fully exists (meets description 100%)	Our organization fully meets the capability description
4	Fully exists and optimized (meets description >100%)	Our organization optimally meets the capability description
5	Fully exists and adaptive(meets description >100% continuously >1 year)	Our organization optimally meets the capability description, continuously adapting it for more than one year

Source: Gartner (June 2026)

This assessment takes about 20 minutes to complete. After completing the form, click the “Submit and View Results” button. This will generate your tailored report. This report also contains an averaged overview of all capabilities’ maturity level, with Table 4 as guidance.

Table 4: Overall AI Maturity Levels

Level number ↓	Overall AI maturity (across AI capabilities) ↓
1	Planning: The organization considers the use of AI
2	Experimenting: The organization conducts AI pilot and proof-of-concept projects
3	Stabilization: The organization has several AI solutions in production
4	Scaling: AI is applied across the organization
5	Leading: The organization fully leverages and depends on AI

What You Get

Summary of Results

Receive an in-depth report that provides:

- A heat map with your current maturity and target maturity level for each capability
- A visualization of the largest gaps between current and target maturity that you should consider for improvement
- A series of recommendations and resources to address each gap

Table 1: Tier 1 AI Capabilities

Tier 1 AI capability	Description	Topics covered
AI strategy	Develop and execute the AI strategy: The development and implementation of an AI strategy that is aligned with the organization's business strategy and its AI ambition	Trends, ambition, strategy, roadmap, alignment, innovation, transformation
AI value	Manage the AI portfolio and use cases: The systematic identification, prioritization and management of AI initiatives	Use cases, products, portfolio, prioritization, feasibility, business case, benefits and costs, metrics
AI organization	Evolve the AI operating model: The integration and collaboration within the AI ecosystems, including internal teams and external partnerships	Operating model, center of excellence, teams, partners, alliances, ecosystem
AI people and culture	Foster people and culture for AI: The organization's commitment and ability to foster AI literacy, AI skills and a culture of innovation	Roles, workforce, staffing, skills, literacy, training, culture, change, organizational readiness
AI governance	Govern AI and manage risks: The establishment and enforcement of governance policies and standards to ensure ethical and compliant AI practices	Risks, trust, security, safety, ethics, regulations, compliance, policies, guidelines, monitoring

AI engineering	Engineer AI systems and platforms: The robustness and efficiency of AI development and deployment processes	Design, architecture, buy/blend/build, test, embedding, deployment, operations, infrastructure, platforms, frameworks, methodologies, collaboration
AI data	Prepare and manage data for AI: The quality, accessibility and utilization of data for AI applications	Data acquisition, preparation, quality, integration, semantics, data platform, privacy, multimodal data

Table 2: Tier 2 AI Capabilities

<i>Tier 2 AI capability</i> ↓	<i>Description</i> ↓
<i>AI strategy</i>	
Monitor and interpret AI trends	Run a trend-scanning program and analyze the impact of trends on the organization.
Develop and rationalize the AI vision	Set the AI vision and ambition, combined with assessing and monitoring the organizational readiness for AI.
Develop and refine the AI strategy	Author and align the AI strategy, involving key AI stakeholders.
Develop and coordinate the AI roadmap	Develop and execute an AI roadmap with short-term and long-term milestones, coordinated with stakeholders.
Promote AI-driven innovation	Foster a culture of innovation by identifying and scaling ideas and experiments.
<i>AI value</i>	
Manage the AI use-case portfolio	Assess and prioritize AI use cases, and align the AI use-case portfolio with business objectives and AI capabilities.
Manage AI value propositions	Manage AI value propositions, develop business cases, measure value realization and monitor AI portfolio performance.
Develop the AI product portfolio	Identify and develop AI product opportunities, manage AI product portfolio, stakeholder engagement, communication and funding.

<i>Tier 2 AI capability</i> ↓	<i>Description</i> ↓
<i>AI organization</i>	
Develop external AI partnerships	Develop, foster and monitor external partnerships and alliances for AI.
Manage the AI ecosystem	Strategize and balance insourcing and outsourcing for AI capabilities, while managing continuity risks and dependencies across the AI ecosystem.
Evolve the internal operating model	Create, maintain and monitor the internal AI organization.
<i>AI people and culture</i>	
Manage AI-related change and culture	Foster, communicate and promote a culture and practices that are ready for AI adoption and change.
Evolve AI-related roles and staffing	Identify and develop AI roles and manage workforce planning, staffing and recruitment.
Deliver AI training and literacy	Implement and monitor AI education, upskilling and knowledge sharing.
<i>AI governance</i>	
Evolve AI policies and controls	Create, maintain and monitor AI policies and controls for compliance, ethical, security, safety, sustainability and other risks.
Develop AI governance teams and roles	Establish and evolve the AI governance operating model, including governance organization, processes, responsibilities and decision rights.
Monitor AI and enforce policies	Perform AI governance, oversight and assurance.
<i>AI engineering</i>	

<i>Tier 2 AI capability</i> ↓	<i>Description</i> ↓
Design and architect AI	Establish, apply and optimize AI system and integration architectures, as well as practices for design and engineering.
Develop, test and integrate AI	Select, build, ground, contextualize, train, validate and embed AI models or agents or applications.
Deploy, operate and scale AI	Bring AI models or agents or applications to production, monitor and optimize their security, impact, risks, value and performance, and scale where needed.
Manage AI platform and infrastructure	Develop, promote and monitor the use of an AI platform and infrastructure to facilitate, accelerate and scale AI initiatives.
Manage AI engineering	Initiate, facilitate and coordinate staffing and activities for AI engineering across teams and delivery projects.
<i>AI data</i>	
Acquire and prepare AI data	Source, transfer, store, integrate, transform and validate data for AI engineering and operations.
Manage and govern AI data	Enable the management and ensure the governance of data for AI.
Analyze AI data	Explore, visualize and analyze data to enhance AI training or improve AI-driven insights.
